

Controlling Re-Rent

Inventory management tool can help improve the bottom line

If you're a typical scaffold or access company, you likely rent equipment from multiple vendors. Since this rented equipment is the same as what you own, it's often combined with your own equipment. You return the rental when you can and it comes at a price. By not returning them promptly, your rentals can become an unmanaged cost that erodes your profit margin. But, you can only return equipment if you know where it is and, more importantly, that it is no longer needed.

Avontus Quantify is an inventory management tool that allows you to track equipment you rent to customers as well as what you rent from vendors, or "re-rent."

Avontus Quantify is an inventory management tool that allows you to track equipment you rent to customers as well as what you rent from vendors, or "re-rent." To manage re-rent in Avontus Quantify you create a re-rent transaction for a vendor. That's it.

Re-rent is displayed in line with your own rental inventory, both at job sites and branch offices. In just a few clicks you can see this equipment. It's also displayed in Quantify Mobile Web, which is viewable on your iPhone, Blackberry, or other mobile device.

You can also ship re-rented equipment with your own equipment. Shipments and email notifications include the vendor's name if you are re-renting the equipment.

To manage re-rent in Avontus Quantify you create a re-rent transaction for a vendor. That's it

Returning re-rent equipment is just as easy as renting it; simply create a "Return from Re-Rent" transaction and select the location you want to ship from and the vendor whom you rented from.

Various reports display the equipment you are re-renting – both total quantities as well as quantities by location (job site and/or branch office). Re-rent is also included in utilization reports.

Timely return of re-rented equipment delivers bottom line improvement. Get control of this cost and see your margins improve significantly.
