

Product Overview

Avontus Quantify is a Windows-based scaffold rental management system with many features.

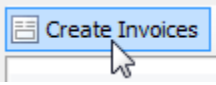

Asset Management

Quantify gives you the ability to instantly view quantities at branch offices, laydown yards, job sites and areas. A user-friendly tree view of your company's structure allows you to quickly see your inventory quantities, value, and utilization as well as consolidated views of your equipment at all locations. Quantities are updated through shipments, purchases, sales, transfers, adjustments and re-rent so you have a full transaction history for your inventory. You can also create estimates and reserve items so they can't be shipped to another job site.

Rental Billing

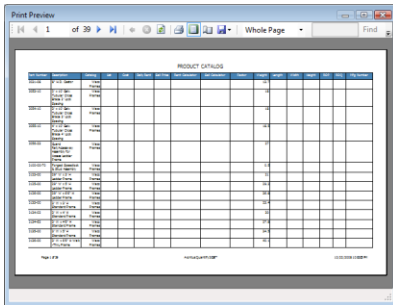

Generating rental invoices can be the most time-consuming aspect of running a scaffolding, shoring, or formwork business. Quantify was designed to meet the demands of the most challenging billing situations, allowing you to cut costs with business process improvements as well as reduce the time between invoicing and collecting payment. Quantify creates invoices based on deliveries and returns (partial or otherwise), automatically handling the task of determining what equipment is on rent and what has been returned. Quantify tracks your billing cycles and knows when invoices need to be created. You can bill in advance (pre-bill), arrears (post-bill) or 'first advance then arrears'. You can also invoice for additional charges such as labor, freight or engineering fees.

Re-Rent Tracking

Re-rentals (items you rent from a vendor and re-rent to your customer) are tracked seamlessly alongside your own inventory. Deciding when to rent or return re-rent from vendors is no longer a time-consuming task.

Part Number	Description	Owner	For Rent
10328	3' P Steel Filler	Symons	7
10328	3' P Steel Filler		4

Reporting

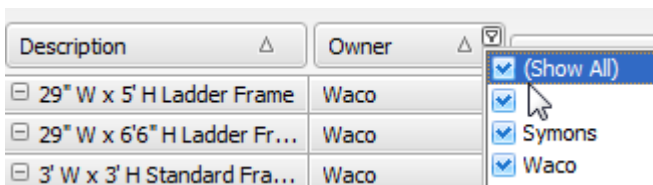

Straight out of the box, Quantify contains many useful reports. Utilizing modern and powerful Microsoft reporting tools, reports can be quickly previewed and saved in a variety of formats including Excel, Word and PDF. You can also customize the reports, invoices and delivery tickets yourself.

How businesses gather, manage, and use information will determine whether they succeed or fail.

Pivots and Metrics

Summarization of information is at your fingertips and under your complete control. Quantify lets you create your own reports with 'pivots' similar to Microsoft Excel pivot charts. Pivots enable you to arrange and summarize data in any way you can imagine. View sales by customer within a given date range, for example. Just drag and drop the fields you want to view and the information is there for you.

Interface to Accounting

Quantify can help you avoid the double entry of data in your business by integrating with QuickBooks right out of the box. Quantify can also integrate with SAP, JD Edwards & MS Dynamics; please contact us to discuss your requirements. Accounting integration can provide a full job costing solution.

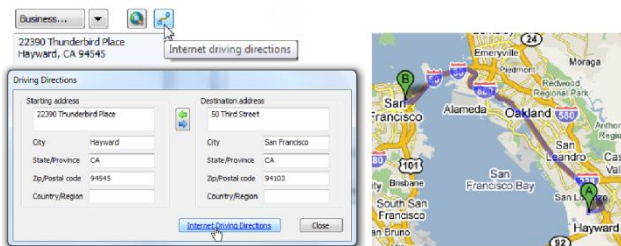

Scalability & Connectivity

Quantify is developed using the latest technology from Microsoft which allows us to customize your implementation. From a single-user installation at one branch to a 500-user system spread across many branch offices, Quantify is fully scalable. As your business grows, Quantify can grow with you.

You may also use Quantify Mobile Tools, which uses the internet as a local network. This has the added feature of allowing you to view inventory quantities from a mobile device such as a Blackberry or iPhone.

Latest Technology

Quantify uses the latest technology to map out locations of job sites, branch offices and laydown yards to create driving directions. You can attach GPS devices to your serialized assets to track them or set alerts to automatically email you when equipment needs to be inspected.

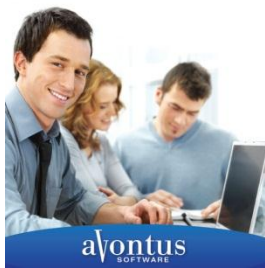

Software Assurance with Automatic Updates

Avontus focuses on customer satisfaction and upgrades features based on customer feedback. Our goal is to deliver software that is learnable and usable and performs as it was intended to do. This philosophy allows us to deliver software that provides value to our customers right out of the box, often with very little training. New features are added to Quantify on a regular basis and delivered through automatic updates. All updates are thoroughly tested so that no functionality is lost and defects are kept to an absolute minimum. Updates are also carefully designed to ensure the least disruption to ongoing business processes.

API

Quantify includes an API (application programming interface) that allows your developers to add features independently or with assistance from Avontus. The API is useful for large organizations with their own IT department that would like to integrate Quantify with specialized, back-office systems that perform related tasks.

About Avontus Software

Avontus has been producing software for the formwork, scaffolding, and shoring industries since 1995. Using the latest technology and focusing on the user experience, our software is well-respected in the industry. Our employees are highly-skilled computer and business professionals who understand big-picture problem solving. We are committed to providing quality software and excellent customer service.

As a Microsoft Certified Partner and a member of the Scaffold Industry Association, Avontus has delivered many successful implementations to both small and large enterprises.
